# MINOR PROJECT

## Part A: Medical Terminology

Give the meanings of the following terms.

**1.** dysphagia Difficulty in swallowing food or liquids.

**2.** polyphagia Excessive hunger or an increased appetite that leads to eating more than usual.

**3.** dyspepsia A condition characterized by indigestion or discomfort in the upper abdomen.

**4.** biliary atresia A congenital condition in which the bile ducts are absent, blocked, or improperly developed.

**5.** pyorrhea A condition involving the discharge of pus, particularly from the gums.

**6.** cholestasis A condition in which the normal flow of bile from the liver is reduced or blocked.

**7.** esophageal atresia A congenital defect in which the esophagus does not develop as a continuous passage to the stomach.

**8.** pyloroplasty A surgical procedure performed to widen the opening between the stomach and the small intestine.

**9.** splenorrhagia Bleeding from the spleen.

**10.** proctosigmoidoscopy A diagnostic procedure used to examine the rectum and sigmoid colon using a specialized viewing instrument.

**11.** hemorrhage The escape of blood from damaged blood vessels, resulting in bleeding.

**12.** cholangitis Inflammation of the bile ducts, commonly caused by a bacterial infection associated with obstruction of bile flow.

## Part B: Laboratory Tests and Clinical Procedures

Match the name of the laboratory test or clinical procedure with its description. Write the correct term on the line.

**Word Bank:** Abdominal ultrasonography; Barium enema; CT scan of the abdomen; Endoscopic retrograde cholangiopancreatography; Endoscopic ultrasonography; Gastric bypass (bariatric surgery); Gastrostomy (G tube); HIDA scan; Laparoscopy; Liver biopsy; Nasogastric intubation; Percutaneous transhepatic cholangiography; Serum bilirubin; Small bowel follow-through; Stool culture; Stool guaiac (Hemoccult)

**1.** measurement of bile pigment in the blood
Answer: Serum bilirubin

**2.** placement of feces in a growth medium for bacterial analysis
Answer: Stool culture

**3.** x-ray examination of the lower gastrointestinal tract
Answer: Barium enema

**4.** imaging of abdominal viscera via sound waves
Answer: Abdominal ultrasonography

**5.** test to reveal hidden blood in feces
Answer: Stool guaiac (Hemoccult)

**6.** sequential x-ray images of the small intestine
Answer: Small bowel follow-through

**7.** injection of contrast material through the skin into the liver, to obtain x-ray images of bile vessels
Answer: Percutaneous transhepatic cholangiography

**8.** insertion of a tube through the nose into the stomach
Answer: Nasogastric intubation

**9.** transverse x-ray pictures of the abdominal organs
Answer: CT scan of the abdomen

**10.** injection of contrast material via endoscope to obtain x-ray images of the pancreas and bile ducts
Answer: Endoscopic retrograde cholangiopancreatography (ERCP)

**11.** reduction of stomach size and gastrojejunostomy
Answer: Gastric bypass (bariatric surgery)

**12.** insertion of an endoscope and use of ultrasound imaging to visualize the organs of the gastrointestinal tract
Answer: Endoscopic ultrasonography

**13.** percutaneous removal of liver tissue followed by microscopic examination
Answer: Liver biopsy

**14.** visual examination (endoscopic) of abdominal viscera through small abdominal incisions
Answer: Laparoscopy

**15.** new opening of the stomach to the outside of the body for feeding
Answer: Gastrostomy

**16.** radioactive imaging of the liver, gallbladder, and intestine
Answer: HIDA scan
